

Some Notes about this wireframe:

1. This single page portfolio app will consist of four main sections. They are About, Experience, Projects and Contact. These are labelled in the navigation. Each navigation link will move you to the appropriate section of the single page app. The navigation will stay on the screen as you scroll up and down.

2. The work experience section will consist of prior work experience in a list. Each item will expand into more details when chosen using Javascript to hide and show divs.

3. The projects sections will consist of the required garllery image and links to the github projects / repositories and an extra project I have been working on outside of school. Not all six of the items will be on the screen at a time. There will be an opton to scroll through the items like a photo gallery left or right (think Amazon Prime Video or Hulu)

4. Images will be provided at a later date as they were not required at this point of the process.

5. This wireframe was inspired by another example of an online portfolio. Source below:
